## Session

T169. Mantle Plumes on Terrestrial Planets (Including Earth)

## Session Description

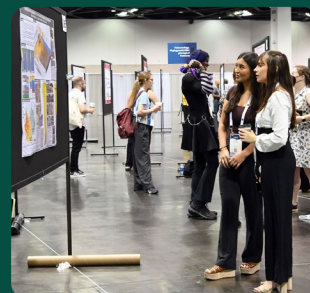

All the terrestrial planets have (or had) magmatism associated with mantle plumes. We will explore plume-related magmatism on the terrestrial planets from petrologic, geochemical, and geophysical constraints. Of particular interest are the implication from plume properties for planetary mantles.

## Session Chairs

Allan Treiman, Justin Filiberto

## Session Endorsers

GSA Planetary Geology Division; GSA Mineralogy, Geochemistry, Petrology, and Volcanology Division
